

EIZO Among the First Companies to Acquire the Latest International Standards for Occupational Health, Safety, and Energy Management

Hakusan, Japan, December 13, 2019 – EIZO Corporation (TSE : 6737) and EIZO MS Corporation acquired both ISO45001:2018 (Occupational Health and Safety Management System) and ISO50001:2018 (Energy Management System) certifications. EIZO is one of the first companies to be certified with ISO50001 by TÜV Rheinland Cert GmbH, which was accredited by DAkkS – the major national accreditation organization in Germany.

ISO45001 (Occupational Health and Safety Management System) is the standard for management practices for the prevention of occupational accidents, and establishment and continued improvement of safety and health in the work environment. Company work styles as they pertain to these topics are becoming more widely discussed on a global scale, as the responsibility towards employee well-being continues to be a huge focus for successful and moral business operations. EIZO's effective operation under this management system minimizes risks to occupational health and safety, and takes preventive and protective measures.

ISO50001 (Energy Management System) is concerned with energy consumption and the improvement of energy efficiency. EIZO's effective operation under this management system promotes energy savings leading to reduction in greenhouse gas emissions, which is global concern. In addition, EIZO has already acquired ISO14001 (Environmental Management System), which certifies its efforts to further mitigate impact on the environment.

EIZO has been working towards improved occupational health and safety activities, as well as energy efficiency as part of its duty and commitment towards its employees and the environment. Soon after being issued the latest international standards, EIZO was audited by the third-party certification body, TÜV Rheinland Cert GmbH, and was certified that these efforts meet international standards.

EIZO will continue to conduct itself according to high standards with regards to health, safety, and responsible energy management as it upholds its philosophy to enrich people's lives for a better tomorrow.
