It takes about 30 minutes (under our measurement conditions) for the monitor display to stabilize. Please wait 30 minutes or more after the monitor power has been turned on, and then adjust the monitor.

Monitors should be set to a lower brightness to prevent a loss in the screen quality caused by long-term use and to maintain stable use.

When the screen image is changed after displaying the same image for extended periods of time, an afterimage may appear. Use the screen saver or power save function to avoid displaying the same image for extended periods of time. Depending on the image, an afterimage may appear even if it was displayed for a short period of time. To remove such a phenomenon, change the image or keep the power turned off for several hours.

If the monitor displays continuously over a long period of time, dark smudges or burn-in may appear. To maximize the life of the monitor, we recommend the monitor be turned off periodically.

Periodic cleaning is recommended to keep the monitor looking new and to prolong its operation lifetime (refer to "[Cleaning](#)" (page 4)).

The LCD panel is manufactured using high-precision technology. Although, missing pixels or lit pixels may appear on the LCD panel, this is not a malfunction. Percentage of effective dots: 99.9994 % or higher.

The backlight of the LCD panel has a fixed lifetime. Depending on the usage pattern, such as usage for long continuous periods, the lifespan of the backlight may run out sooner, requiring replacement. When the screen becomes dark or begins to flicker, please contact your local EIZO representative.

Do not scratch or press on the LCD panel with any sharp objects, at this may result in damage to the LCD panel. Do not attempt to brush with tissues as this may scratch the panel.

When the monitor is cold and brought into a room or the room temperature goes up quickly, dew condensation may occur on the interior and exterior surfaces of the monitor. In that case, do not turn the monitor on. Instead wait until the dew condensation disappears, otherwise it may cause some damage to the monitor.

Chapter 1 Introduction

Thank you very much for choosing an EIZO color LCD monitor.

1-1. Features

- 17" LCD
- Supports a resolution of 1280 x 1024
- LED backlight LCD panel

The LED backlight provides better power efficiency and reduced power consumption compared to existing fluorescent backlight LCD panels. No mercury, a hazardous substance, is used.

- Touch Panel provided

- Surface Acoustic Wave technology

The touch panel provides high durability and is highly transmissible. The surface can also be controlled while wearing hand gloves.

- Stereo speakers

- Power saving function

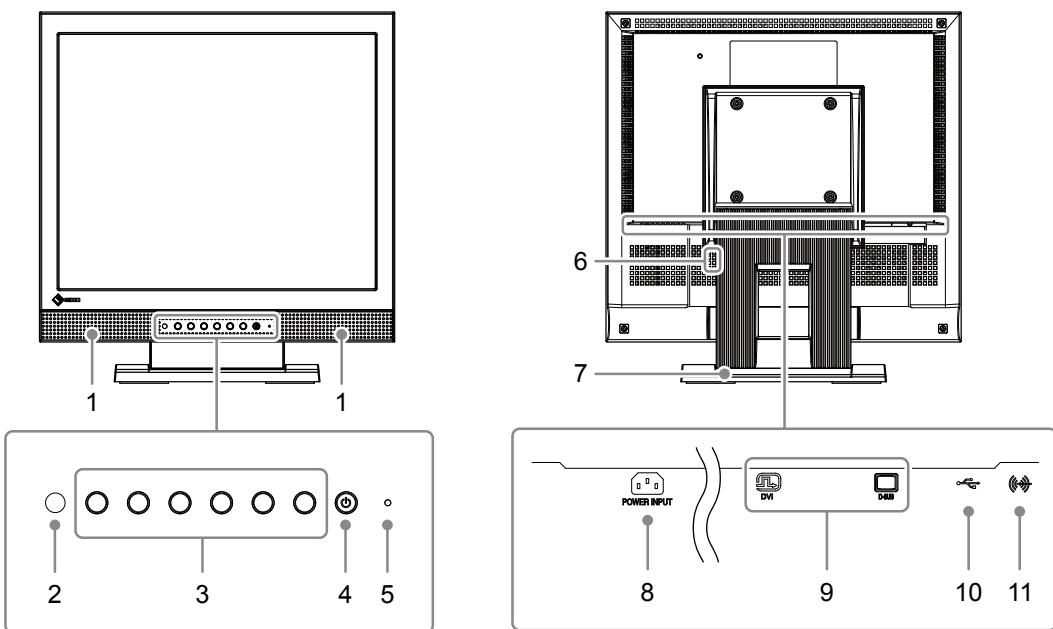

Suppressing the power consumption reduces the carbon dioxide emissions. This product is equipped with various power saving functions.

- Auto EcoView function

The sensor on the front side of the monitor detects the environmental brightness to adjust the screen brightness automatically and comfortably. Unnecessary high brightness is bad for the environment because of the higher power consumption, and it increases strain on the eyes. You can lower the brightness by using Auto EcoView.

See "[2-4. Conserving Energy](#)" (page 12).

1-2. Controls and Functions

1. Speakers	Outputs audio.
2. Ambient light sensor	Detects the ambient brightness. When Auto EcoView is used, the screen brightness is automatically adjusted to the ambient brightness (page 12).
3. Control buttons	Displays menus. Operate the buttons according to the operation guide (page 15).
4. Power button	Turns the power on or off.
5. Power indicator	Indicates the monitor's operation status. Blue: Normal operation mode Orange: Power saving mode OFF: Power off
6. Security lock slot	Complies with Kensington's MicroSaver security system.
7. Stand	Used to adjust the angle of the monitor screen.
8. Power connector	Connects the power cord.
9. Input signal connectors	Left: DVI-D connector / Right: D-Sub mini 15-pin connector
10. USB upstream port	Connects the PC to the monitor with a USB cable.
11. Stereo mini jack	If you connect an external device using the stereo mini jack cable, external audio can be output from the monitor.

Chapter 2 Basic Adjustment/Setting

This product enables users to change the brightness according to personal preference or to suit the usage environment and reduce power consumption to conserve energy.

This chapter describes the basic functions that can be adjusted and set using the buttons on the front of the monitor.

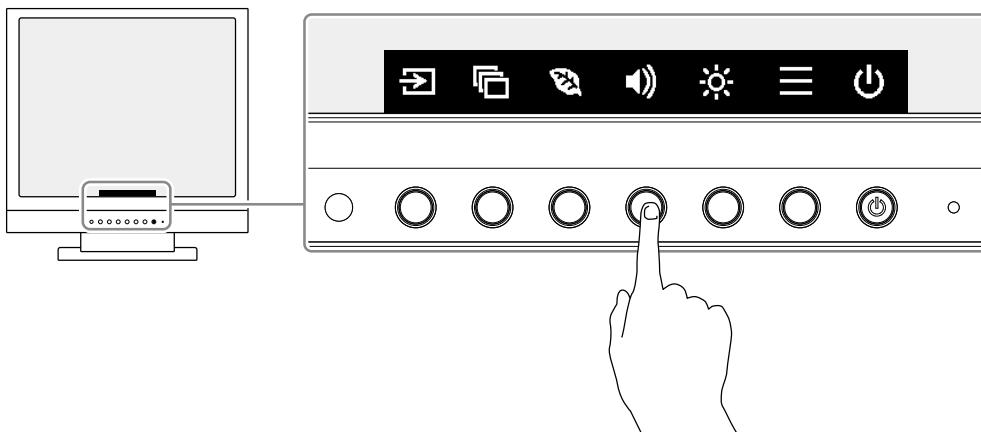

For advanced adjustment and setting procedures using the Setting menu, see “[Chapter 3 Advanced Adjustment/Setting](#)” (page 15).

2-1. Button Operation Method

1. Displaying the operation guide

1. Press any button (except \odot).

The operation guide appears on the screen.

2. Adjusting/setting

1. Press a button for adjustment/setting.

The Adjustment/Setting menu appears.

(A submenu may also be displayed. In this case, select the item for adjustment/setting using \wedge \vee and select \checkmark .)

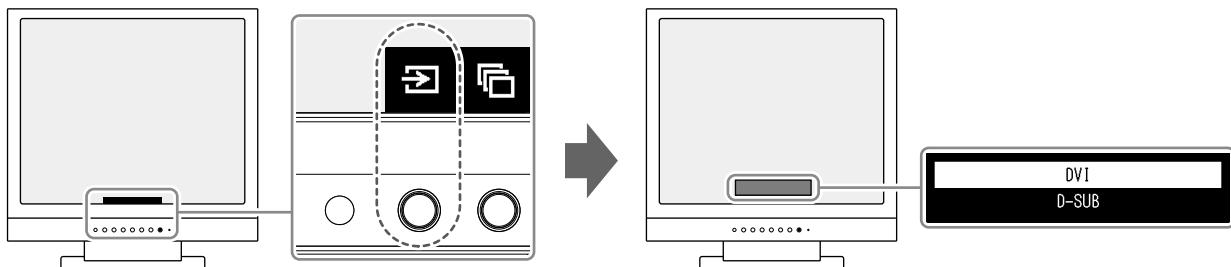

2. Perform adjustment/setting with the buttons and select \checkmark to accept the changes.

3. Exiting

1. Select \times to exit the menu.

2-2. Switching Input Signals

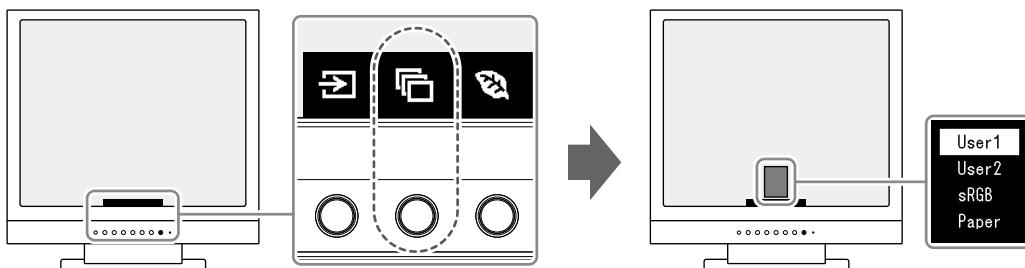

When a monitor has multiple signal inputs, the signal to display on-screen can be changed.

2-3. Switching Display Modes (Color Modes)

This product is preinstalled with color modes for various display purposes.

Switch the mode according to the purpose and content for display. This allows the monitor to display images in a manner appropriate to the display content.

● Display Modes

Color Mode	Purpose
User1	Select either of these modes to set a user-defined display mode.
User2	
sRGB	This mode is suitable for matching color reproduction with peripheral devices that support sRGB, such as when printing photos taken using a digital camera.
Paper	This mode uses color tones and contrast similar to that of paper to produce a printed paper effect. It is suitable for displaying images from media such as books and documents.

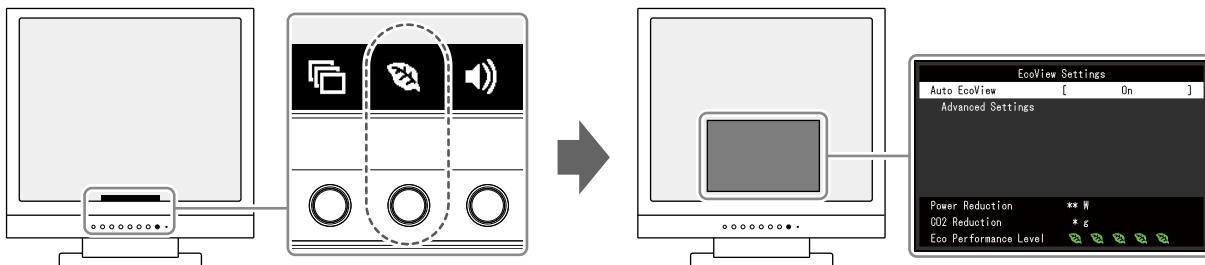

Note

- In Paper mode, the amount of blue light emitted from the screen is reduced by changing the color tone and controlling the brightness.

2-4. Conserving Energy

This monitor is equipped with EcoView functions to enable users to conserve energy.

You can use this function to curtail unnecessary power consumption and save on electricity expenses. Saving power also reduces carbon dioxide emissions.

Note

- The power saving level (Power Reduction, CO₂ Reduction, and Eco Performance Level) can be checked on the “EcoView Settings” menu. The more indicators that light up representing the Eco Performance Level, the higher the power saving level attained.
 - Power Reduction: the reduction in the backlight’s power consumption as a result of the adjusted brightness value.
 - CO₂ Reduction: converted from the “Power Reduction” value, this is an estimate of the quantity of CO₂ emissions reduced when using the monitor for 1 hour.
- The numeric value is a result of calculation based on a default setting (0.000555t-CO₂/kWh) determined by a Japanese ministerial ordinance (2006, Ministry of Economy, Trade and Industry, Ministry of Environment, civil code article 3) and may differ depending on country and year.
